

ESERCIZIO 10.12.2025

Allego la prima schermata dove sono riuscito ad entrare in DVWA secuerity

The screenshot shows a web browser window with the address bar displaying "http://127.0.0.1/DVWA/security.php". The page content is the DVWA Security page, which includes a sidebar with various attack categories like SQL Injection, XSS (DOM), and DVWA Security (which is highlighted). A message at the top right indicates that the security level is set to low. Below the sidebar, there's a "Logout" button and some user information: Username: admin, Security Level: Security Level: low, Locale: en, SQLi DB: mysql.

E la seconda schermata dove sono entrato su BURP

The screenshot shows the Burp Suite interface. The "Proxy" tab is selected, showing an intercept session. The request list shows a single entry: "11:00:15 10 Dec... HTTP → Request GET http://127.0.0.1/DVWA". The "Request" pane displays the raw HTTP request, and the "Inspector" pane shows the request attributes, query parameters, body parameters, cookies, and headers. The status bar at the bottom indicates "Memory: 133.6MB" and "Disabled".
